                                                      specification. The crystal of PKBbeta, and methods are useful in activating protein kinases, particularly AGC kinases, for identifying modulators of protein kinase activity, and for structural analysis of other protein kinases. The crystal may also be used in manufacturing a medicament for treating cancers, diabetes, erectile dysfunction or neurodegemeration. The current sequence represents the crystallised PKBbeta molecule C-terminal tail.
                                                                                                                                                                                                                                                               Also disclosed is a method for determining the structure of a PKB derivative, analysing a PKBbeta-ligand complex, determining a three-dimensional structure for a target kinase, and a computer system or computer-readable media containing atomic coordinate data listed in the

ID AAB9
AC ACAB
AC AAB9
AC ACAB
AC A The present invention describes a method for identifying a compound that modulates protein kinase activity. The method comprises measuring the ability of the compound to inhibit, promote or mimic the interaction of a hydrophobic pocket-containing protein kinase with an interacting polypeptide. The interacting polypeptide interacts with the hydrophobic pocket of the protein kinase and/or comprises the amino acid sequence phe/Tyr-Xaa-Xaa-phe/Tyr [1]. The method is useful in screening assays for developing pharmaceutical compounds or drugs. Compounds, polypeptides or polypucleotides from the present invention are useful in medicine. particularly in the manufacture of a medicament for treating a patient in need of modulation of signalling by a hydrophobic pocket-containing protein kinase. Specifically, the patient has cancer or diabetes or is in

                                         The invention relates to a crystal of protein kinase Bbeta (PKBbeta). Three-dimensional protein coordinate data is given in the specification. Also disclosed is a method for determining the structure of a PKB derivative, analysing a PKBbeta-ligand complex, determining a three-dimensional structure for a target kinase, and a computer system or computer-readable media containing atomic coordinate data listed in the specification. The crystal of PKBbeta, and methods are useful in modulators of protein kinases, particularly AgC kinases, for identifying modulators of protein kinases, particularly and for structural analysis of other protein kinases. The crystal may also be used in manufacturing a medicament for treating cancers, diabetes, erectile dysfunction or
                                                                                                                                                                                                                                                                                or a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          therapy. The crystal of PKBbeta, and methods from the present invention, are useful in activating protein kinases, particularly AGC kinases, for identifying modulators of protein kinase activity, and for structural analysis of other protein kinases. The crystal may also be used in manufacturing a medicament for treating cancers, diabetes, erectile dysfunction or neurodegeneration. The present sequence represents a peptide which is used in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                  14-AUG-2001; 2001GB-00019860

                                                                                                                                                                   The present invention relates to small molecules that are protein kinase regulators, activators and inhibitors, compositions containing such compounds and their pharmaceutical use. The invention is useful for the prevention or treatment of a disease related to an AGC kinase such as cancer, diabetes, neurodegenerative diseases, Alzheimer's disease, Parkinson's disease, AIDS associated dementia, amyotrophic lateral sclerosis, multiple sclerosis, schizophrenia, cardiomycete hypertrophy, reperfusion, ischemia and baldness. The present sequence is an activated protein kinase B beta (PKBbeta) peptide, PIFtide. PKB belong to the AGC intermediate the present sequence is an activated protein kinase B beta (PKBbeta) peptide, PIFtide. PKB belong to the AGC intermediate the present sequence is an activated protein kinase B beta (PKBbeta) peptide, PIFtide. PKB belong to the AGC intermediate the present sequence is an activated protein kinase B beta (PKBbeta) peptide, PIFtide. PKB belong to the AGC intermediate the protein kinase B beta (PKBbeta) peptide, PIFtide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        scleroderma; cardiomycete hypertrophy; reperfusion; ischemia; baldne neuroprotective; antiparkinsonian; nootropic; anti-hiv; neuroleptic; cardiovascular-gen.; endocrine-gen.; vasotropic; cytostatic; antidiabetic; protein kinase B beta; PKBbeta.
                                                                                                                                                                                                                                                                                                                                                                                  New ketone, amide, ester and carbonyl derivatives useful for treating e.g. cancer, multiple sclerosis, amyotrophic lateral sclerosis, Alzheimer's disease, Parkinson's disease, reperfusion, ischemia and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sequence

                                                                                           This invention relates to a method for altering the substrate specificity of phosphoinositide-dependent protein kinase 1 (PDK1), by exposing it to CC an interacting polypeptide. Included in the invention are a preparation CC comprising PDK1 and an interacting polypeptide, PDK1 with altered CC specificity is useful for phosphorylating a residue corresponding to the CC specificity is useful for phosphorylating a residue corresponding to the CC specificity is useful for phosphorylating a residue corresponding to the CC specificity of pDK1 are useful for manufacturing a peptide Phe/Tyr-Xaa-Xaa CC Phe/Tyr-Ser/Thr-Phe/Tyr. Altered PDK1 is also used for phosphorylating CC protein kinase C related protein kinase 2 (PRK2). The compound identified CD by methods of the invention that are capable of altering the substrate competions and for protein kinase 2 (PRK2). The compound identified CD pathway and/or PDK1 are useful for manufacturing a medicament for competitive policy and for pDK1 are useful for manufacturing andicament for competitive policy and for PDK1 pDK2 or PRK2 signalling. A compound that is capable of protein a patient who is in need of modulation of the insulin signalling CC pathway and/or PDK1, PDK2 or PRK2 signalling. A compound that is capable of reducing the activity of PDK1 may be useful in treating cancer. PDK1, e.g. via protein kinase B and/or CC pDK1 may be capable of providing a survival signal that protects cells compound that protects cells cells cells compound that protects cells cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Substrate specificity; phosphoinositide-dependent protein kinase 1; PDK1; protein kinase C related protein kinase 2; PRK2; cancer; apoptosis; mechanical tissue damage; ischaemic disease; stroke; myocardial infarction; antigenic peptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Altering substrate specificity of kinase 1, to phosphorylate Ser473 interacting polypeptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Region B of

CC
CC of phosphoinositide-dependent protein kinase 1 (PDK1), by exposing it to CC an interacting polypeptide. Included in the invention are a preparation CC comprising PDK1 and an interacting polypeptide, PDK1 with altered CC specificity is useful for phosphorylating a residue corresponding to the Ser/Thr residue of a substrate with the following peptide PDK1 with altered CC specificity is useful for phosphorylating a residue corresponding to the Ser/Thr residue of a substrate with the following peptide PDK7-Xaa-Xaa CC -Phe/Tyr-Ser/Thr-Phe/Tyr. Altered PDK1 is also used for phosphorylating CC protein kinase C related protein kinase 2 (PRK2). The compound identified by methods of the invention that are capable of altering the substrate cc specificity of PDK1 are useful for manufacturing a medicament for CC treating a patient who is in need of modulation of the insulin signalling capating a reducing the activity (i.e. the PDK1 and/or the PDK2 activity) of PDK1 capable of reducing the activity (i.e. the PDK1 and/or the PDK2 activity) of PDK1 may be useful in treating cancer. PDK1, e.g. via protein kinase B and/or CC SGK, may be capable of providing a survival signal that protects cells from apoptosis induced in a variety of ways. Reduction of the activity of PDK1 may promote apoptosis and may be useful in treating cancer. CC condittions in which along apoptosis may be of benefit may also include in inhibiting apoptosis. Increased activity of PDK1 may lead to increasing the activity of suppress apoptosis. Increased activity of PDK1 may lead to increased conditions of the disease include, mechanical (including heat) tissue injury or schemic disease include, mechanical (including heat) confidency or ischaemic disease include, mechanical (including heat) confidency or recomposed and myocardial confidency or position or recomposition. The peptide is capable of altering the substrate peptide. The peptide is capable of altering the substrate confidency of PDK1 in the method of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    밁

                                                 The present invention describes a method for identifying a compound that CC modulates protein kinase activity. The method comprises measuring the CC ability of the compound to inhibit, promote or mimic the interaction of a CC hydrophobic pocket-containing protein kinase with an interacting CC pocket of the protein kinase and/or comprises the amino acid sequence CC pocket of the protein kinase and/or comprises the amino acid sequence CC polyneptide. The interacting polypeptide interacts with the hydrophobic pocket of the protein kinase and/or comprises the amino acid sequence CC polynucleotides from the present invention are useful in screening assays for CC polynucleotides from the present invention are useful in medicine, particularly in the manufacture of a medicament for treating a patient in CC need of modulation of signalling by a hydrophobic pocket-containing CC protein kinase. Specifically, the patient has cancer or diabetes or is in need of inhibition of apoptosis, e.g. a patient suffering from tissue CC is also useful for inhibiting the degree or rate of phosphorylation by the protein kinase. The interacting polypeptide or compound is useful in methods of stabilising a hydrophobic pocket-containing protein kinase, CC where the protein kinase is exposed to the compound or polypeptide.

CC AAB99786 to AAB99847 represent amino acid sequences, and AA44210 and CC of the protein to protein containing and CC of the protein collapse and collapse collapse containing protein kinase, CC of the protein collapse collapse collapse containing protein kinase, CC of the protein collapse collapse collapse containing protein kinase, CC of the protein kinase is exposed to the compound or polypeptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     SX
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Matches

                                                                                                                                                                                                        cc modulates protein kinase activity. The method comprises measuring the cability of the compound to inhibit, promote or minic the interaction of a chydrophobic pocket-containing protein kinase with an interacting compression of the protein kinase and/or comprises the amino acid sequence pocket of the protein kinase and/or comprises the amino acid sequence cc phe/Tyr-Xaa-Xaa-Phe/Tyr (I). The method is useful in screening assays for developing pharmaceutical compounds or drugs. Compounds, polypeptides or comprise the amino acid sequence of the protein kinase and/or compound in medicine, do need of modulation of signalling by a hydrophobic protein kinase. Specifically, the patient has cancer or diabetes or is in compact of inhibition of apoptosis, e.g. a patient suffering from tissue compound or composition is also useful for inhibiting the degree or rate of phosphorylation by the protein kinase. The interacting polypeptide or compound is useful in methods of stabilising a hydrophobic pocket-containing protein kinase, the protein kinase is exposed to the compound or polypeptide. Cc AAB99786 to AAB99847 represent amino acid sequences, and AAH44210 and cof the present invention.

It is required in higher cells for entry into S-phase and mitosis. Component of the kinase complex that phosphorylates the repetitive C-terminus of RNA polymerase II. Catalytic component of MPF (By similarity).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                preliminary data.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                      NUCLEOTIDE
                                                                                       preliminary data.

FUNCTION: Plays a key role in the control of the eukaryotic cell cycle. It is required in higher cells for entry into S-phase and mitosis. Component of the kinase complex that phosphorylates the repetitive C-terminus of RNA polymerase II. Catalytic component capacitic C-terminus of RNA polymerase II. Catalytic component capacitic ACTIVITY: ATP + a protein = ADP + a phosphoprotein. SUBUNIT: Forms a stable but non-covalent complex with cyclin B in mature occytes (By similarity).

SIMILARITY: Belongs to the Ser/Thr protein kinase family.

SIMILARITY: Contains 1 PH domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        l Similarity

Chem. 276:29550-29558(2001).

FUNCTION: IGF-1 leads to the activation of AKT3, which may play role in regulating cell survival. Capable of phosphorylating several known proteins. Truncated isoform 2/PKB gamma 1 without the second serine phosphorylation site could still be stimulated but to a lesser extent.

CATALYTIC ACTIVITY: ATP + a protein = ADP + a phosphoprotein.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Brodbeck D., Hill M.M., Hemmings B.A.;

"Two splice variants of PKB gamma have different regulatory capacity depending on the presence or absence of the regulatory phosphorylatio site Ser-472 in the C-terminal hydrophobic domain.";

J. Biol. Chem. 276:29550-29558(2001).

-i. FUNCTION: IGF-1 leads to the activation of AKT3, which may play a role in regulating cell survival. Capable of phosphorylating several known proteins. Truncated isoform 2/PKB gamma 1 without the second serine phosphorylation site could still be stimulated but to a lesser extent (By similarity).

-i. CATALYTIC ACTIVITY: ATP + a protein = ADP + a phosphorotein.

-i. SUBCELLULAR LOCATION: Cytoplasmic and membrane associated after cell stimulation leading to its translocation.

ISOID SPECIFICITY: Isoform 1 is expressed in prostate, testis, uterus and mammary gland and isoform 2 is expressed in prostate testis and mammary gland.

DCMAIN: Binding of the PH domain to the phosphatidylinositol 3-kinase alpha (PI(3)K) results in its targeting to the plasma
                                                                                                                                                                                                                 membrane.

PIM: Phosphorylated on threonine and serine residues.

Phosphorylation on both sites is required for full activit

Phosphorylation on both ser/Thr protein kinase family.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    SUBUNIT: Binds TLR2 via their respective extracellular domains. Binds MyD88 via their respective TIR domains (By similarity). SUBCELLULAR LOCATION: Type I membrane protein. Plasma membrane phagosomes (By similarity).

TISSUE SPECIFICITY: Ubiquitous. Highly expressed in spleen, ovaperipheral blood leukocytes, thymus and small intestine. SIMILARITY: Belongs to the Toll-like receptor family. SIMILARITY: Contains 8 LRR (leucine-rich) repeats.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    by the UniProt Consortium, see http://www.uniprot.org/terms under the Creative Commons Attribution-NoDerivs License
